

SENIOR STRUCTURAL ENGINEER

Coventry

Frank W. Haywood & Associates are a busy award winning Midlands based consultancy, who specialise in providing structural services for medium to large prestigious buildings for private clients.

We have an immediate requirement for a Chartered or very near chartered Senior Structural Engineer who is capable of working under their own initiative, running projects from concept to completion. They will be expected to liaise with clients and architects, be self-motivated, comfortable working on their own producing design packages including drawings or working with and mentoring a junior technician / draughtsman.

The projects ~~we work on~~^{on which we work} are generally constructed predominantly from ^masonry including finely detailed stonework, with secondary elements in steel and concrete where required. The position available is considered to be more fitting to Engineers from a small consultancy background wishing to work on slightly larger projects as opposed to Engineers used to large multi storey framed commercial or residential projects. Thus, technically competent Engineers with a broad background of building structures in all materials and experience of handling projects on site from surveying through to inspections, are preferred.

A good team player with fluent English, a proven track record and a full UK driving licence is required.

The applicant will need to be fully conversant with 2D AutoCAD, Microsoft Office and a key understanding of design analysis programs is essential.

Salaries are negotiable dependant on qualifications and experience.

Please send your CV and covering letter, including salary expectations to:
